Priority Applications (No Type Date): JP 74130153 A 19741112

Abstract (Basic): JP 51055724 A

Dental alloy contains 68-96% Au and 1-10% Co, with 0-31% of ≥ 1 of Ag, Cu, Zn, Pd, Ir and Rh. The alloy is heated to 800-1000 degrees C solid-soln. treated, and then age-hardened by heating to 300-500 degrees C. With melting point low at 1000 degrees C, casting is easy. Temp. difference between the m.pt. and coagulation point is 28-60 degrees C, so segregation is not produced by quenching. Props. are not inferior to conventional Pt-contg. Au alloy. Hardness after solid soln. treatment is soft at 130-150, giving good machinability. After age-hardening hardness is 240-280.
